

# SC Global: The 1st Truly Global Technical Conference on the Grid

## Overview

The SC Conference ([www.supercomp.org](http://www.supercomp.org)) is the premiere technical and industrial meeting for high-end networking and computing and computational science. At the SC'2001 conference, to be held in Denver Nov. 10-16 2001, we will create the first truly global technical conference: a multi-national and multi-cultural meeting place for communication and discussion of ideas relating to high-end computing and communications and its impacts on science and society.

The SC Global event will use Access Grid technology ([www.accessgrid.org](http://www.accessgrid.org)) to link the SC Core at the Denver Convention Center with dozens of SC Constellation sites distributed both across the U.S. and worldwide. A rich set of panels, workshops, birds-of-a-feather sessions, and invited talks will exploit the SC Global infrastructure to enable communication and discussion among the international community and across a broad spectrum of U.S. institutions. SC Constellation sites will develop unique local programs that combine SC Global with local material.

## How you can participate

- Propose multi-national and multi-site BOFs, panels, workshops.
- Develop remote educational activities.
- Bring unique remote content to technical talks or the showfloor.
- Propose an international or U.S. Constellation Site.
- Apply SC Global infrastructure to industrial programs.
- Join the team to help construct and operate SC Global!
